Is it possible to use E-BARQ data in my study?

Yes. If you are a **researcher** or a **university student** with a potential research project, you can apply to the E-BARQ Team to use the E-BARQ data.

If you are **not a researcher** and interested in using E-BARQ data informally, we suggest you form an E-BARQ Group. This Group will give you access to all horses in your Group and allow you to use the data from their *Share-&-Compare* graphs. You can form a Group here: https://e-barq.com/profile/?action=create-group

What will I need to do to conduct a collaborative project with the E-BARQ Team?

1. Your research questions must be discussed and approved by the E-BARQ Team.

2. You will be responsible for recruiting a negotiated number of E-BARQ participants who can provide data related to your area of investigation.

3. Once you have reached the target number of new respondents, the dataset will be made available to you.

4. The employment of the E-BARQ Team's preferred statistician for your project is highly recommended. This colleague has unique familiarity with E-BARQ and C-BARQ data and charges very reasonable rates. It is anticipated that this colleague will be invited to co-author peer-reviewed articles using E-BARQ data.

5. Studies should be designed to result in an open-access publication, authored by the investigative and E-BARQ Team and funded by the guest investigators' host institution.
